## **PATENT**

#### IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicants: Jiunn-Ren Hwang, Jui-Tsen Huang, Chang-Jyh Hsich

5 Filing Date: 09/01/2004

Art Unit: 1756

Serial No.: 10/711,198

Docket No.: NAUP0493USA4

Examiner: YOUNG, CHRISTOPHER G

10 Confirmation No.: 5197

Title: OPTICAL PROXIMITY CORRECTION METHOD

To: Commissioner for Patents

15 P.O. BOX 1450

Alexandria, VA 22313-1450

Subject: Information disclosure statement under 37 C.F.R.§1.56.

20

25

Dear Sir:

This is an Information Disclosure Statement in accordance with the duty to disclose information material to patentability under 37 CFR §1.56. The applicant wishes to make of record the document(s) listed on the accompanying form PTO/SB/08.

Since this IDS is filed after the mailing date of the first Office action but before final Office action, consideration of the information disclosure statement is hereby requested according to 37 CFR §1.97(c).

That each item of information contained in the information

From: 8064986673 To: USPTO Page: 6/81 Date: 2005/11/24 下午 04:34:25

disclosure statement was first cited in an Office communication mailed on 2005/09/20 for the counterpart Japan patent application No. 2003-132557, which are no more than three months prior to the filing of the information disclosure statement.

5

According to the requirement set forth in 37 C.F.R.§1.98 and M.P.E.P. 609, the applicants are submitting a copy of the cited reference (Japan patents publication No. 11-102063, 5-19446, and 6-266095) and their English language abstracts hereinafter.

10

15

20

25

30

The abstract of the application (Japan patents publication No. 11-102063) is hereby presented to fulfill the information disclosure statement requirement set forth in 37 C.F.R.§1.98 and M.P.E.P. 609. The English language abstract of the application (Japan patents publication No. 11-102063) is listed as follows:

#### PROBLEM TO BE SOLVED:

To improve the transfer accuracy of intricate and fine patterns formed on an optical mask by patterning the phase shift film on a mask substrate to the shapes resembling the plane shape with the circuit patterns to be formed on a semiconductor wafer or the inversion patterns thereof.

## SOLUTION:

Metallic layers 3 are patterned and formed to prescribed shapes on the main surface of the mask substrate 2 constituting a mask 1a. The original picture of integrated circuit patterns is composed of light shielding regions A and transmission regions B. The one transmission region B comprises a part coated with a transparent film (a) and a part not formed with this transparent film 4a. At the time of exposure, a phase difference of 180° is induced between the phase of the light transmitted through the transparent film 4a out of the light which is cast on the mask 1a and is transmitted through the one transmission region B

From: 8064986673 To: USPTO Page: 7/81 Date: 2005/11/24 下午 04:34:25

and the phase of the light transmitted through the ordinary transmission regions B. These light rays weaken each other in the boundary parts between the light shielding regions A and the transmission regions B and, therefore, unsharpness is reduced.

5

10

15

20

The abstract of the application (Japan patents publication No. 5-19446) is hereby presented to fulfill the information disclosure statement requirement set forth in 37 C.F.R.§1.98 and M.P.E.P. 609. The English language abstract of the application (Japan patents publication No. 5-19446) is listed as follows:

#### **PURPOSE:**

To provide the reduction stepping method which allows exposing of diversified and fine patterns in the process for production of the semiconductor device or semiconductor integrated circuit device.

#### CONSTITUTION:

This method consists in executing reduction stepping by using a phase shift mask provided with prescribed correction patterns 101b at the ends of a mask pattern region of a specified mode or in the boundary parts of the mask pattern regions of plural modes. Since an end effect, etc., are offset by the correction patterns, the exposing of the diversified and fine patterns is executed.

The abstract of the application (Japan patents publication No. 6-266095) is hereby presented to fulfill the information disclosure statement requirement set forth in 37 C.F.R.§1.98 and M.P.E.P. 609. The English language abstract of the application (Japan patents publication No. 6-266095) is listed as follows:

30

## PURPOSE:

To eliminate a defect generated from the non-uniformity of a thin layer

From: 8064986673 To: USPTO Page: 8/81 Date: 2005/11/24 下午 04:34:26

of chromium of a damping phase shift type reticle.

#### CONSTITUTION:

This reticule 20 is provided with a secondary resolution pattern 22 in an area other than a graphic part to be formed. By the secondary resolution pattern 22, the radiation light of practically uniform and attenuated intensity is transmitted. By the graphic part, phase shift is performed to the secondary resolution pattern 2 as the following. That is, the phase of light passed through the graphic parts is shifted for about 180° to the phase of the radiation light passed through the secondary resolution pattern 2 surrounding the graphic parts and attenuated.

15

Respectfully submitted,

20

Wenton Han
